

# ARS Business Continuity Essential Back-Up/Recovery

***ARS Business Continuity: Providing a plan to safe guard business data and minimize downtime with our virtual servers.***

---

## **The ARS Business Continuity Service provides:**

- Infinite and secure cloud storage capacities leveraged with AWS Cloud Services.
- Data replication across multiple data centers—Protects from local or regional disasters, weather catastrophes, or cascading failure events!
- Back-up entire servers, not just select files—Recover everything, not just parts!
- Secure encryption of your data files, compliant with PCI-DSS, HIPAA/HITECH, FedRAMP, EU Data Protection Directive, and FISMA. Pass your next risk audit!

- Proven technology used by Georgia Pacific, Nasdaq, Sysco, Nielsen, Siemens, GE Healthcare, and 3M for the same purpose.
- “Spin-Up” a virtual server periodically to test run your backed up data! Do more than just verify your backed up files are safe—run your programs and verify!
- Run your business on a virtual server while waiting for your replacement server!

## **ARS Business Continuity Plans:**

### **Plan One—Basic Back-up: \$90.00/mo.**

- Weekly back-up entire server, Nightly back-up data files.
- Daily reports emailed for confirmation.
- Just a safe, bare-bones back-up and recovery.

### **Plan Two—Real-Time Back-up (Near Real-Time): \$130.00/mo.**

- All features of Plan 1.
- Real Time Back-up of changed files (backs up new/changed files when they occur!).
- Actual time dependent on processing and transfer speeds; roughly about 15 min increments.

### **Plan Three—Data File Realtime Ransomware Protection: \$295.00/mo.**

- All of Plan 2 options.
- Data Record/File Level back-up in real-time. Record read/write verifies no encrypted files.
- Data replication to secondary location as data is entered, then only verified data is backed-up.
- Requires dedicated secondary drive location for data replication: virtual server, PC, workstation.
- Primary server backed-up to secondary server, actual real-time at time of data record write.
- Ransomware protection for data files only.
- Non-data files, server file, and program files protected in Plan 2 back-up options (included).
