ARS Business Continuity
Essential Back-Up/Recovery

ARS Business Continuity: Providing a plan to safe guard business data and minimize downtime with our virtual servers.

The ARS Business Continuity Service provides:

- Infinite and secure cloud storage capacities leveraged with AWS Cloud Services.

- Data replication across multiple data centers—Protects from local or regional disasters, weather catastrophes, or cascading failure events!

- Back-up entire servers, not just select files—Recover everything, not just parts!

- Secure encryption of your data files, compliant with PCI-DSS, HIPAA/HITECH, FedRAMP, EU Data Protection Directive, and FISMA. Pass your next risk audit!

- Proven technology used by Georgia Pacific, Nasdaq, Sysco, Nielsen, Siemens, GE Healthcare, and 3M for the same purpose.

- "Spin-Up" a virtual server periodically to test run your backed up data! Do more than just verify your backed up files are safe—run your programs and verify!

- Run your business on a virtual server while waiting for your replacement server!

ARS Business Continuity Plans:

Plan One—Basic Back-up: $70.00/mo.
- Weekly back-up entire server, Nightly back-up data files.
- Daily reports emailed for confirmation.
- Just a safe, bare-bones back-up and recovery.

Plan Two—Back-up & Virtual Server: $90.00/mo.
- All features of Plan 1 PLUS Virtual Server ready.
⇒ Periodic verification of data, one day run-time, one user, $150.00/event.
⇒ Disaster event, continuation of business, priced based on cost of event.

Plan Three—Real-Time Back-up & Virtual Server: $110.00/mo.
- All features of Plan 2.
- Real Time Back-up of changed files (backs up new/changed files when they occur, real time!).

Plan Four—Data File Realtime Ransomeware Protection: $175.00/mo.
- Data Record/File Level back-up at near real-time. Record read/write verifies no encrypted files.
- Data replication to on-site location as data is entered, then only verified data is backed-up.
- Requires dedicated secondary on-site location for data replication: 2nd server, PC, workstation.
- Primary server backed-up per Plan 2 above, secondary location back-up real-time.
- Ransomeware protection for data files only; server/program files protected in back-up options.
