

ARS Modification or à la carte Upgrade List

ARS is pleased to provide a list of Master System modifications or selective upgrade features. This list is not definitive or complete. All modifications or features may be customized to meet your expectations or requirements.

Please let us know if you do not see a modification or feature you would like to implement.

Your modification can pay for itself: If you do not require the modification to be proprietary to your system, when other clients purchase the same feature, we credit your account 10% of what you paid up to ten times per project!

Modification List References: Utility Project indicates a clean-up activity done once and not a permanent installation. Version specific features may be standard on later version of Master System. Not all modifications or features listed are complete; some may be in quote status or in concept discussions with clients.
